According to NEISS (National Electronic Injury Surveillance Systems of United States Consumer Products) horse activities rank approximately 64th among the activities of people relative to injuries that result in a stay at US Hospitals. Related injuries can be severe requiring more hospital days and resulting in more lasting residual effects than injuries in other activities. **NO HORSE IS A COMPLETELY SAFE HORSE**. Horses are 5 to 15 times larger, 20 to 40 times more powerful and 3 to 4 times faster than a human is. If a rider falls from a horse to the ground it will generally be at a distance of 31/2 to 51/2 feet and the impact may result in injury or death to the rider. Horseback riding is the only sport where one much smaller, weaker predator animal - the human-tries to control and become on unit of movement with another much larger, stronger prey animal-the horse,

with each having a limited understanding of the other. If a horse is frightened to provoked it may divert from its training and act according to its natural survival instincts which may include but are not limited to : stopping short, changing directions or speed at will, shifting its weight from side to side, bucking, rearing, biting, kicking, or running from perceived danger.
